Converted Sewer Overflows

18th October 2009

SBU Completed 3 converted sewer overflows in late August on behalf of ETM4. Richard Ibbotson, Mark Drugan and Andrew Griffiths carried out the main work, helped out at the end by Trevor Gell, Richard Henderson and Mick Johnson to ensure that they were ready for the handover in September.

This is Thomas Street, CSO Cornholme, one of the last ones to be completed. This was also one of the most difficult pieces of work due to the location and a very busy road. The highways wouldn't close the road due to the diversion being 30 miles long so we had to contend with working in a tight area and using special plant equipment for excavation. The team were presented with a 5 star site award from ETM!! Well done to all those involved.
